4. The following is an examiner's statement of reasons for allowance: Applicant has claimed a carrier device comprised of a plurality of analysis sites able to fix a chemical or biological reagent. The analysis sites are formed of microdishes hollowed out of the carrier to form a bottom, sidewalls, and edge area. The areas surrounding the microdishes are planar and made of hydrophobic material. The bottom of the microdish is made of a first hydrophobic material, while at least part of the side walls and edges is made from a second hydrophobic material. The first hydrophobic material is able to fix the reagent while the second hydrophobic material is not able to do so. This is shown in
